Melika Shahghadami

Technical Artist | 3D Artist | Unity | VR | Unreal Engine

Technical Art • 3D Modeling • Unity & Unreal Engine • VR • Optimization

Unity & Unreal Engine | Technical Art & Optimization | VR • Meta Quest 3

Skills

3D Art

High/Low Poly Modeling • Retopology • UV Mapping • PBR Texturing • Baking • Materials • Mesh Optimization

Technical Art

Unity URP • Shader Graph • VFX / Particle Systems • Scene & Lighting Setup • Profiling & Performance Optimization • Editor Tools

Character Art

Rigging • Skinning • Animation Controllers

VR

Meta Quest 3 Optimization • Real-time Performance

Software

Primary

Blender | Unity | Unreal Engine | Substance Painter

Additional

Photoshop | Maya | Character Creator | iClone | PureRef | Illustrator

Key Projects

- **Industrial Warehouse — Unity URP**
  PBR Materials • Volumetric Lighting • Environment Art
- **VR Driving Simulator — Unity / Meta Quest 3**
  Day/Night Cycle • Environment Art • Optimization
- **Multiplayer Shooter — Unity / VR / FPS**
  Level Design • Cover Placement • Sightlines
- **Cinematic Environment — Blender / Cycles**
  PBR • Volumetric Fog • Particle Systems

About Me

Technical Artist and 3D Artist with 3+ years of experience producing and preparing real-time assets for games, simulators and VR projects. Experienced in modeling and optimization, PBR texturing, rigging, and technical asset implementation in Unity and Unreal Engine. Focused on balancing visual quality and performance, especially in VR projects and on Meta Quest 3.

Work Experience

Ario Sorun — 3D Designer & Technical Artist — 2023 – Present

- Asset implementation in Unity, scene layout, material setup and lighting.
- Mesh, texture and draw call optimization to improve performance in VR projects on Meta Quest 3.
- Developing and standardizing the asset production pipeline for better coordination between Art and Development teams.

Pishgaman Lotus — 3D Designer & Godot Programmer — 2022 – 2023

- Environment and modular 3D asset design for game projects.
- Collaborated with the development team on technical implementation and final build preparation.

Tarsim Dadeh — Java Developer — 2021 – 2022

- Developed and maintained software modules in Java; debugging and code optimization.

Education

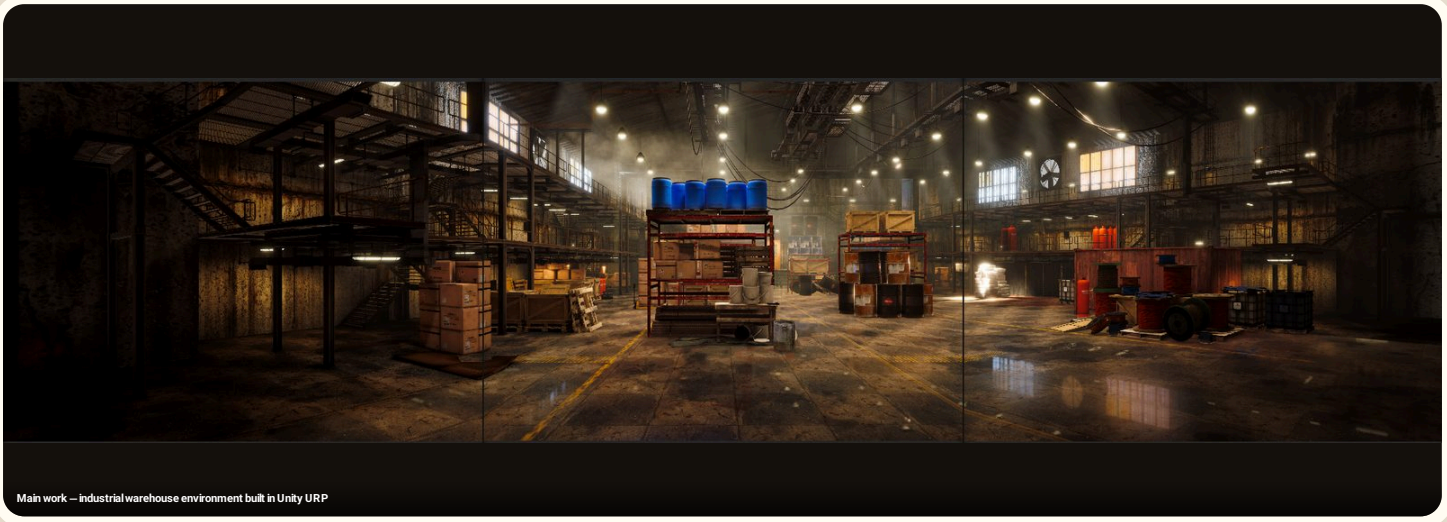

- B.Sc. Computer Engineering — Shahid Beheshti University (2016–2021)
- M.Sc. IT Management — University of Tehran, Markazi Branch (2021–2023)

Industrial Environment in Unity

Industrial Warehouse • Unity • URP

Melika Shahghadami | Technical Artist | Environment Art + Volumetric Lighting

Main work — industrial warehouse environment built in Unity URP

About the Project

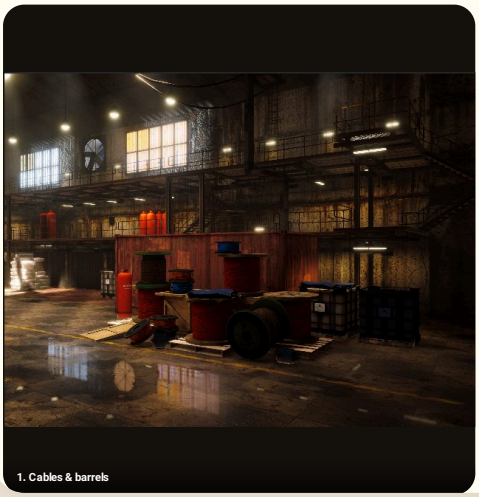

Industrial warehouse environment built in Unity using URP, focusing on PBR materials, volumetric lighting, environment art, and the design and layout of industrial props. The scene is optimized for real-time rendering and use in game projects.

Unity · URP · Environment · Lighting · PBR · Level Art

Technical Specs

URP	Volumetric	Game Ready
Render Pipeline	Volumetric light & fog	Optimized for games

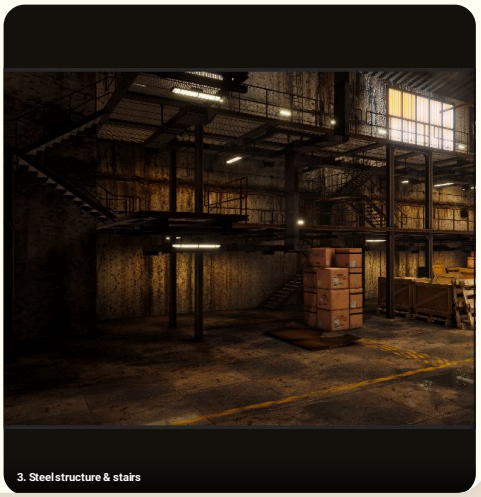

Environment details — 3 warehouse angles — Unity URP

1. Cables & barrels

2. Shelving & props

3. Steel structure & stairs

Mountain Lake

Mountain Tunnel Entrance

Road & Speed Bump

Lakeside Route & Buildings

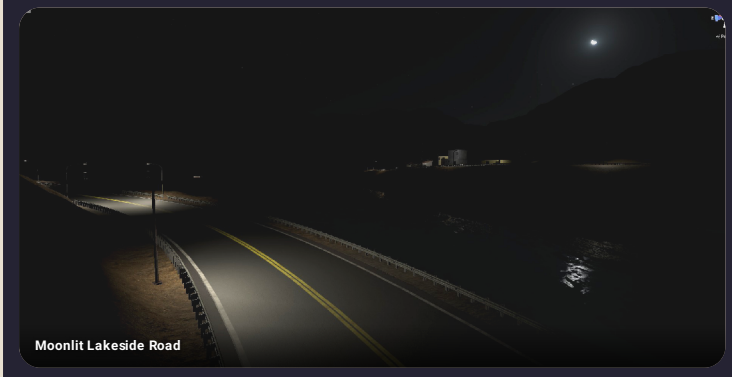

About the Multiplayer Project

Multiplayer VR driving simulator for Meta Quest 3 with a shared environment and day/night cycle. The environment includes a mountain road, tunnel, lake, vegetation and structures, with dynamic lighting and real-time optimization targeting 72+ FPS.

Overview of the desert environment with adobe architecture and vegetation

Competitive route with cover and sightlines for FPS gameplay

Cover & Side Route View

Competitive View — Main Route

About the Project

First-person multiplayer shooter environment set in a desert with adobe architecture and palm groves. As technical artist, I was responsible for level layout, optimization for multiplayer, and route design with cover and sightlines for balanced gameplay. The environment is designed in Unity for multiplayer FPS, focusing on route readability, player flow and performance.

Cinematic 3D Environment

Cinematic 3D Environment • Blender • Cycles • Atmospheric Lighting

Melika Shahghadami | Technical Artist | Main piece + lighting variant

Main work — full cinematic environment with windmill, abandoned hut, stone tower and lake — Blender Cycles

About the Project

Personal cinematic environment built in Blender combining a windmill, abandoned hut, stone tower and lake. The scene is created with Cycles, PBR materials, atmospheric lighting, volumetric fog and particle systems, and features water with reflections and displacement.

Blender | Cycles | PBR | Main | Lighting Variant | Cinematic

Lighting variant — lake and reeds — Blender / Cycles

Lake and reeds — overcast day, still water

Wolf Character — Modeling & Fur

Wolf Character • Blender Particle Hair • Fur Grooming • PBR Texturing

Melika Shahghadami | Technical Artist | Modeling + Particle Hair / Fur Grooming

Final render — three-quarter view with studio lighting and fur detail

Final render — side view with PBR texturing and fur grooming

About the Project

Wolf character project focused on high/low poly modeling, retopology, UVs, PBR texturing and fur grooming in Blender. The fur is built with particle hair and grooming, and the model is prepared for both real-time and offline rendering.

Blender | Particle Hair | Fur Grooming | PBR | Retopology | Character Art | Organic Modeling

Technical Features

- Low/high poly modeling with optimized retopology
- UV and PBR texturing with fur detail
- Particle hair and fur grooming in Blender

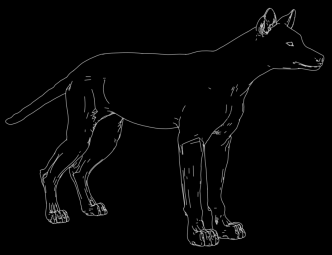

Artistic Achievements

- Organic character modeling focused on anatomy and surface detail
- Particle hair and fur grooming for rendering
- Studio lighting and final presentation
